# INDIANA POSTSECONDARY EDUCATION FINANCING STUDY: 1999-2000

## I. Introduction

For over 15 years the Commission for Higher Education has, on an occasional basis, conducted studies to learn more about how students attending Indiana's public colleges and universities pay for their education. The primary focus of the studies, also known as the *How Students Pay* studies, has been full-time undergraduate students who are served by state, federal, and institutional/private student financial aid programs. This study follows the last study, which reported on the 1994-95 academic year, in its use of student cost and financial aid data collected at the student unit level by the Commission's Student Information System (SIS). The SIS database provides a wealth of information on student costs, student and parent income information, and a wide variety of student aid programs.

The current study begins with a description of student costs and the five types of financial resources available to students to help them meet those costs. The five resources are parent contribution, student contribution, grant and scholarship programs, loan programs, and work programs. Special attention is given to the way that each resource is distributed among students.

Total resources—that is, the five types of resources combined—are then compared to total cost, and the shortfall between total resources and total cost is noted.

Finally, a special analysis provides a progress report on one of the Commission's state-level performance indicators: the gap between combined parent contribution and grants/scholarships and the total cost of attendance for the poorest students. For a variety of reasons, including relatively low tuition and fee increases in the late 1990s (low, that is, relative to the increases of the early 1990s), increased awards in the federal Pell Grant program and the state's Higher Education Award program, and a substantial change in the enrollment patterns toward lower cost institutions, the gap by which the combined parent contribution and grants/scholarships fall short of total cost for the poorest students has shrunk from where it stood in 1994-95.

For comparative purposes, this 1999-00 update strictly adheres to the methodology followed in previous *How Students Pay* studies. Nevertheless, the 1999-00 study also includes new information that reflects some of the changes in student financial aid since the early- and mid-1990s, particularly in the area of unsubsidized federal student loans, which appeared after the 1992 reauthorization of the federal Higher Education Act. Finally, the 1999-00 study includes in its appendices information on total financial aid reported by all Indiana colleges and universities, including the independent institutions that submit SIS data; and total academic year financial aid reported by Indiana's public institutions.

## II. Student Costs

The total cost of attending a public college for a two-semester academic year, as estimated and reported by the institutions, varies significantly from campus to campus (Figure 1). These student expense budget estimates, which include tuition and fees, books and supplies, room and board, and miscellaneous expenses, range from a low of \$6,090 for a student commuting from home to Vincennes University, to \$15,593 for an IUPUI student living off-campus.

Estimated student expense budgets have increased for all institutions since the *How Students Pay* study was last conducted, though the increases have varied widely from institution to institution. Student expense budgets increased the most, 51.7%, for IU Northwest students living off campus. Student expense budgets have increased the least, 6.5%, for PU West Lafayette students living off campus.

Three factors explain the wide campus-to-campus variation in student cost estimates. The first factor is the *analytical factor*, under which campus financial aid officers attempt to reflect reality through various students surveys, book store surveys, real estate surveys, etc. This addresses the fact that residence hall rates, and especially apartment rents, may vary widely from one campus or community to another. The second factor is the *professional judgment factor*, under which different individuals may have different opinions about the personal sacrifice that should be expected of students. The third factor is the *marketing factor*, under which cost estimates may be systematically adjusted upward or downward to accommodate or attract students and their families.

The estimated cost of attendance is a key factor when financial aid officers compute a student's eligibility for most need-based financial aid programs, and it is an important element of the remaining cost analysis described later in this paper.

(1) Tuition and fee figures from Chapter 2.2 of the Commission's Fact Book. Tuition and fees cover two 15-hour semesters for students.

If a campus has differential tuition and fee rates based on program of study, Figure 1 includes only the lowest campus rate.

(2) Living expenses include room and board, books, supplies, transportation, and miscellaneous personal expenses. Living expense data is provided by institutions as part of their Student Information System submissions.

### III. Student Population

As noted in the introduction, this study draws its data from the Commission's Student Information System (SIS) database, which provides detailed demographic, financial, and academic data for each of the 325,610 students who attended an Indiana public campus in 1999-00.

Grand Total	325,610	275,130	104,921	69,038	50,820

**Note 1:** This is the most inclusive figure available. It includes all students who attended an Indiana public postsecondary institution at any time during the 12-month 1999-2000 year.

**Note 2:** Undergraduates, as identified by student level codes 2-8 (inclusive) and 13.

**Note 3:** Students who enrolled for 12 or more credit hours during the Fall 1999 semester AND who enrolled in 12 or more credit hours during the Spring 2000 semester.

**Note 4:** Students who received financial aid during the two-semester academic year, as identified by an aid-status code of 2 or 4.

**Note 5:** Includes Indiana resident students only. Adjusted Income, Student Contribution, Parent Contribution, Dependency Status, and Student Expense Budget are necessary data elements for some of the analyses in this report. These data elements may not be available for some financial aid recipients, especially those receiving merit (non-need-based) awards, where a student's financial situation is not a selection factor. Records with student expense budgets of less than \$2,500 were assumed erroneous or incomplete and were removed from the "complete data" data set.

As indicated in Figure 2, of the 325,610 students attending public campuses, 275,130 were undergraduate students. Of the undergraduates, 104,921 enrolled full-time for both semesters. Of the full-time students, two-thirds (69,038) reportedly received some type of financial aid. Those 69,038 students are the primary focus of this paper, although the population is further reduced to 50,820 for some analyses that require data elements not available for some students. The number of full-time undergraduates who received financial aid in 1999-00 was nearly 12,000 students higher than the figure reported for 1994-95

Students may further be classified as either *dependent* or *independent*. While the official classification is marked by precise definitions, a dependent student is generally a younger, straight-from-high-school, unmarried, traditional college student. Independent students tend to be older, further removed from high school, and no longer financially reliant on their parents. Many independent students are married and/or have children. The distinction between independent and dependent students is important because in assessing a student's financial need for student aid, a monetary contribution is generally expected from the parents of a dependent student, but not from the parents of an independent student. In addition, loan limits are higher for independent students in recognition of the fact that independent students often have fewer financial resources to draw on than dependent students. Figures 3a, 3b, and 4 report family income information for dependent financial aid recipients and student income information for independent financial aid recipients.

## IV. Available Financial Resources

Students pay for postsecondary education through a variety of resources, including expected parent contribution, expected student contribution, grants and scholarships, educational loans, and employment income. More complete information about each of these resources follows.

### Expected Parent Contribution

A tenet of student financial aid administration is that parents of dependent students are expected to contribute to the educational expenses of their children according to their means, taking into account their income, assets, number of dependents, and other relevant information. A complex formula known as the “federal methodology” takes these and other data elements into consideration and computes the expected parent contribution. Parents may actually contribute more or less than the expected parent contribution, but the expected amount is assumed to be available when determining the need for additional financial assistance.

On average, the expected parent contribution increases with family income (Figure 5). In the lower family income groups, parents are expected to contribute a very small amount toward students’ total cost of attendance. In fact, for families with incomes below \$20,000, the expected parent contribution typically falls in the \$100 to \$300 range.

At the opposite extreme, in the higher parent income groups, parents are expected to be able to contribute an amount that may exceed the cost of their child’s attendance. This typically happens to families at around the \$80,000-\$90,000 annual income level. (See Appendix E for more information.) As a result, children of higher-income families may be ineligible for need-based aid (depending on the campus chosen, the number of children from the family attending college, and the expected student contribution).

## Expected Student Contribution

Just as parents are expected to contribute to the educational expenses of their dependent children, so, too, are students expected to contribute to their own expenses. Like the expected parent contribution, the expected student contribution is determined by a complex formula. A host of factors, including student assets and income, combine to yield an estimate of the amount that should be available for a student to contribute toward his or her own expenses. Student contributions are expected of both dependent and independent students, but are calculated for the two groups of students in different ways. Figure 5a simply adds the dependent student contribution to the dependent parent contribution exhibited in Figure 5. Figure 6 illustrates the relationship between student income and expected student contribution for independent students.

## Grant and Scholarship Programs

In 1999-00, grants and scholarships totaling \$185,319,871 were provided to about three-quarters of the 69,038 full-time undergraduate financial aid recipients included in this study. While the proportion of students receiving grants in 1999-00 remained about the same as the proportion of students receiving grants in 1994-95, the average amount received per student increased substantially--\$696 for residents and \$842 for nonresidents.

	<u>Total Grant \$ Awarded</u>	<u>Grant Recipients</u>
Indiana Residents		
Dependent	90,497,486	26,708
Independent	43,486,882	10,516
Unknown Dependency	16,686,699	6,527
Nonresidents	34,279,921	6,952
Other Residency	<u>368,883</u>	<u>167</u>
Total	185,319,871	50,870

As indicated in Figures 7 and 8, the largest source of grants and scholarships for all full-time undergraduates who received aid in 1999-00 was the “other” category. This is a significant change from the findings of the 1994-95 *How Students Pay* study, which found the federal government to be the largest source of grant and scholarship aid. Between 1994-95 and 1999-00, the amount of federal aid received by the full-time undergraduate students in this study increased by 14.4%, compared to 68% increases for both state aid and “other” aid. Nevertheless, as demonstrated in Figure 8, when only Hoosier undergraduates are considered, federal aid continues to be the largest source of grants and scholarships.

In spite of its small percentage increases relative to state and other grant and scholarship programs between 1994-95 and 1999-00, federal aid--which consists principally of Pell Grants, the federal government’s largest and most important student aid program--continues to be a significant source of grant aid to students in Indiana. Dependent Hoosier grant recipients received about one-third of their total grant aid from the federal government in 1999-00, while independent Hoosier grant recipients received over 60% of their grant aid from the federal government. Figures 7a through 7d demonstrate the distribution of grants and scholarships across various combinations of residency and dependency.

State government is now the third largest provider of grants and scholarships, even though total state dollars increased by about \$19 million, or 68%, between 1994-95 and 1999-00. The principal source of state grants is the Higher Education Award program operated by the State Student Assistance Commission. A significant driver of the increase in state aid, however, has been the 21<sup>st</sup> Century Scholars program, which provided over \$5 million to Hoosier students in 1999-00.

The “other” category consists mainly of grants and scholarships provided by the institutions themselves; in fact, the institutions awarded slightly more than three-quarters of the total dollars in the “other” category. Also included are any privately-funded awards that are processed through the financial aid offices, such as awards provided by university foundations, Rotary or Kiwanis Clubs, Parent-Teacher Organizations, etc. “Other” grants are particularly important for nonresidents, making up 45% of grant and scholarship aid to independent nonresidents and a remarkable 84% for dependent nonresidents.

Federal grant programs (Figures 9a and 9b) and state grant programs (Figures 10a and 10b) focus primarily on lower income families, while other grant and scholarship programs (Figures 11a and 11b)

extend eligibility into higher family income levels. This follows naturally from the fact that eligibility for most state and federal aid programs is linked to calculated financial need, while many institutional and private grants may be based on merit or some other criteria unrelated to estimated ability to pay.

## Loan Programs

The 1999-00 *How Students Pay* study diverges somewhat from the *How Students Pay* tradition in that it includes information on both need-based and non-need-based borrowing by the full-time undergraduate financial aid recipients included in this study. This expansion permits a more thorough depiction of the types of borrowing that students are engaged in and the types of students who are engaged in borrowing as a result of 1992 changes to the federal Higher Education Act.

The Commission's Student Information System collects information on five types of loans, the majority of which are related to the federal government's student loan programs in some manner. The five types are subsidized Stafford loans, Perkins loans, other repayable need-based loans, non-need-based loans to students (principally unsubsidized Stafford loans), and non-need-based loans to parents (principally PLUS loans).

- Subsidized Stafford loans are federal loans on which the government pays the accrued interest as long as a student is enrolled at least half time. They are based on need; i.e., total cost of attendance; gift, grant, and scholarship aid; work-study; and expected family contribution are all used in the formula to determine eligibility. Students receiving subsidized Stafford loans may also receive unsubsidized Stafford loans as long as they don't exceed total Stafford program limits.
- Perkins loans are federal loans based on exceptional need. The Perkins program is campus-based, with the institution acting as the lender using funds contributed by both the federal government and the institution. The interest rate on Perkins loans is 5 percent. Undergraduates may borrow up to \$3,000 annually through the Perkins program.
- Other repayable loans include loans received from the student's institution or other sources known by the institution. Loans included in this category include health professions loans, nursing loans, etc.
- Unsubsidized Stafford loans are federal loans for which the student is responsible for all interest expenses even while enrolled in school. Unsubsidized Stafford loans are not based on need; i.e., expected family contribution is not a factor in calculating eligibility, though total cost of attendance and all other forms of financial aid are.
- PLUS loans, or Parent Loans for Undergraduate Students, are non-need-based federal loans made to parents with good credit histories. Like unsubsidized Stafford loans, expected contribution is not a factor in calculating eligibility, though total cost of attendance and all other forms of financial aid are. Interest begins to accumulate on these loans at disbursement, and parents begin repaying both principal and interest while their children are enrolled.

Dependent freshmen are limited to \$2,625 in Stafford loans, while dependent sophomores may borrow up to \$3,500 and dependent juniors and seniors may borrow up to \$5,500. Independent undergraduates or dependent students whose parents are ineligible for PLUS loans may borrow up to \$6,625 as freshmen (at least \$4,000 of which is unsubsidized), \$7,500 as sophomores (at least \$4,000 of which is unsubsidized), and \$10,500 as juniors and seniors (at least \$5,000 of which is unsubsidized).

Easier access to loans by families without calculated need has greatly increased the number of students borrowing and the amounts they borrow. As a recent American Council on Education publication explains, Congress, in the 1992 reauthorization of the federal Higher Education Act, "broadened eligibility for subsidized federal student loans, raised annual loan limits, and created a new unsubsidized

student loan program open to all students, regardless of income.”<sup>1</sup> The ACE study finds that “44 percent of dependent BA recipients from families with income of \$100,000 or more the vast majority of whom were not eligible for federal student loans prior to 1992 now borrow to finance their education. Further, those upper-income students who take out student loans borrow about the same median amount as their low-income peers.”<sup>2</sup> The findings are borne out in the Commission’s SIS data.

In 1999-00, educational loans totaling \$237,913,216 were provided to 44,256 of the 69,038 full-time undergraduate financial aid recipients included in this study. Sixty-percent of the loans--\$133,214,405—were classified as need-based loans; the remainder were classified as non-need-based.

	Need-Based Loans		All Loans	
	<u>Amount Borrowed</u>	<u>Number of Borrowers</u>	<u>Amount Borrowed</u>	<u>Number of Borrowers</u>
Indiana Residents				
Dependent	78,692,100	23,536	142,308,851	29,661
Independent	33,858,739	7,802	46,453,970	8,110
Unknown	2,996,321	952	5,352,611	1,377
Nonresidents	17,266,346	3,793	43,235,438	4,962
Other Residency	<u>400,899</u>	<u>123</u>	<u>562,346</u>	<u>146</u>
Total	133,214,405	36,206	237,913,216	44,256

As Figure 12 demonstrates, the subsidized Stafford loan program—the federal government’s principal form of loan aid—makes up about half of the total loans reported and close to 90 percent of all need-based loans. Unsubsidized Stafford loans and Parent Loans for Undergraduate Students (PLUS loans) make up slightly less than half of the total amount borrowed by students in this study.

Figures 13a and 13b track the percentages of dependent and independents Hoosier students who borrow from any sources, and Figures 14a and 14b track the percentages of students who engage only in need-based borrowing. Figures 15a and 15b track the average annual amounts of loans from all sources by income categories and dependency status, and Figures 16a and 16b track the average annual amount of need-based loans by income categories and dependency status. These tables indicate that most financial aid recipients borrow, and they demonstrate that when non-need-based loans are taken into account, students on the upper end of the income distribution are borrowing in greater proportion and higher average loan amounts than students on the lower end of the income distribution.

## Work Programs (Part-time Employment)

Previous *How Students Pay* studies noted that part-time employment is a resource available to all students, but is considered only indirectly in the studies because employment data are incomplete in the SIS database. The database does supply campus-based work-study data, but cannot directly report income from off-campus jobs or even from on-campus jobs outside of work-study. Furthermore, Indiana's state work-study program is overwhelmingly a summer program, hence it would not appear in this study, which includes only financial aid received in the academic year. For the record, 4,208, or six percent, of the 69,038 full-time undergraduate financial aid recipients included in this study received federal work-study aid totaling \$6,020,548, an average of \$1,431 per recipient.

As a result of these data collection and program eligibility issues, income from part-time employment is viewed simply as one of the several options available to students to provide the expected student contribution and to address any potential gap between available resources and cost of attendance.

## V. Combined Financial Resources

Students generally pay for college through a combination, or package, of resources, including an expected contribution from the parents, an expected contribution from the student, federal grants, state grants, institutional and other grants and scholarships, and student loans.

When gauging the adequacy of all financial resources available to a student, one additional resource should be included. The resource, termed *additional borrowing capacity*, is money that students are eligible to borrow, but which they choose not to borrow. Said differently, additional borrowing capacity is the difference between what a student actually borrows and the maximum that the Stafford loan program regulations would have permitted.

In keeping with the methods of previous *How Students Pay* studies, this study takes into account only subsidized—or need-based—Stafford loans, so the maximum loan amounts used to determine additional borrowing capacity are \$2,625 for freshmen, \$3,500 for sophomores, and \$5,500 for juniors and seniors. Furthermore, expected parent contribution and expected student contribution are adjusted in this analysis so that total financial resources cannot exceed 100 percent of the cost of attendance. (See Appendix E for data on and graphic representations of total unadjusted financial resources, which typically exceed 100 percent of the cost of attendance for students in the highest income categories.)

The way in which these resources combine to address a student's total educational cost is shown in Figure 17 for dependent students and Figure 18 for independent students. In each case, the various resources accumulate in layers, with each layer representing a contribution towards total cost. The white area above the accumulated solid-colored layers represents the gap or shortfall between total available resources and total cost. Campus-level and aggregated data for Figures 17 and 18 are found in Appendix A.

### Dependent Students

When resources available to dependent students are added together and layered, about 88% of the cost of attendance is covered for low-income students. That is, the combination of all resources covers all but about 12%, or \$1,188, of the student's expenses. The gap is fairly consistent across income categories up to about the \$40,000 family income level. Both the 12% gap and the consistency of the gap up to the \$40,000 level are very similar to the gap found in the 1994-95 study, which found a 13%, or \$1,200, gap at the lowest income level.

While students in the lowest to lower-middle family income groups are similar in that each group has about 88% of its costs addressed through known resources, they are quite different in the mixture of resources that raise them to the 88% level. Students in the lowest family income groups rely heavily on federal and state grants and receive little assistance from their parents, while students in the higher groups receive less federal and state grant money, receive more assistance from their parents, and borrow more.

The 12% resource shortfall suggests that resources available to most full-time dependent Hoosier undergraduates are sufficient to meet education costs at Indiana public campuses if the students are willing to borrow the maximum allowable amounts. Furthermore, students may rely more on part-time work, or their parents may borrow from the federal PLUS program—neither of which are taken into account in this analysis. As stated in previous *How Students Pay* reports, however, this finding is subject to several caveats:

- Not everyone agrees that students should borrow at the maximum levels.
- The \$1,188 resource shortfall is an average for all institutions and varies significantly from institution to institution (see Figure 19). Some students may not be able to afford their first-choice campus.
- The resource shortfall may be greater for students who attend college part-time and for those who attend independent colleges or universities.

### Independent Students

Figure 18 characterizes the resources available to independent students. Expected student contribution has been adjusted in Figure 18 as it was in Figure 17, though the expected student contribution of very few independent students covers 100% of education costs. The gap between total resources and cost of

attendance for students in the lowest income group is 21%, or \$2,400. The gap is fairly consistent up to the highest income levels. While the percentage of unmet expenses has not changed since 1994-95, the dollar amount has increased some \$300.

As with the dependent students, the 21 percent resource shortfall suggests that resources available to most full-time independent Hoosier undergraduates are sufficient to meet education costs at Indiana public campuses if the students are willing to borrow the maximum allowable amounts. Furthermore, it is worth noting that independent students are eligible for additional unsubsidized Stafford loans unavailable to dependent students. Independent undergraduates or dependent students whose parents are ineligible for PLUS loans may borrow up to \$6,625 as freshmen (at least \$4,000 of which is unsubsidized), \$7,500 as sophomores (at least \$4,000 of which is unsubsidized), and \$10,500 as juniors and seniors (at least \$5,000 of which is unsubsidized). Nevertheless, to reiterate the caveats expressed for dependent students:

- Not everyone agrees that students should borrow at the maximum levels.
- The \$2,400 resource shortfall is an average for all institutions and varies significantly from institution to institution (see Figure 19). Some students may not be able to afford their first-choice campus.
- The resource shortfall may be greater for students who attend college part-time and for those who attend independent colleges or universities.

Note: Income groups at some campuses consist of very few students, occasionally as few as two or three, which may cause great variation in resource shortfall. This is especially true for regional campuses. See Appendix A for additional campus level detail.

## VI. Performance Objective: Cost of Attendance Index

Remaining cost is the amount of money necessary for a student to bridge the gap between the student's available resources and the student's estimated total cost of attendance.

In previous *How Students Pay* studies, the Commission tracked a special version of remaining cost in order to measure progress toward a state-level performance objective related to affordability. Termed the Cost of Attendance Index, this measure focused on the poorest of dependent students—those from families with incomes below \$10,000—and measured remaining cost when the only resources considered were expected parent contribution and grants/scholarships. Student contribution, loans, and student employment were not included as resources in this specially-defined remaining cost.

Bringing the Cost of Attendance Index up to date under the same definition employed in past studies, average remaining cost is now \$4,572, or 47 percent of total cost. That is to say, in order to attend college, dependent Hoosiers from the lowest income levels need to come up with about \$4,600 through some combination of work, borrowing, saving, and cutting back on expenses.

Interestingly, the 1999-00 measure of remaining cost is the lowest recorded by the Commission. Previous measures of remaining cost were:

<u>Year</u>	<u>Amount</u>	<u>% of Cost</u>
1990-91	\$3,650	51%
1992-93	\$4,586	56%
1994-95	\$5,193	57%

While a welcome development, such a substantial and unexpected change demands further investigation. Given the continued increases in tuition and mandatory fees, albeit at a lower rate of increase in the late

1990s than the early 1990s, when tuition increased as a result of stagnant or declining state appropriations, the decline in remaining cost seems counterintuitive.

The reasons for the decrease are found in the distribution of students by institution, increases in federal and state grants as a percent of total cost of attendance, and efforts by the state, Ivy Tech State College, and Vincennes University to keep the cost of attendance relatively low at those institutions. Greater detail on the interaction of these variables is provided in Tables B13 and B14 in Appendix B, but Figure 21 provides the basic information.

<b>Figure 21. Dependent Students with Family Income Under \$10,000 Changes from 1994-95 to 1999-00</b>					
	<u>% of Total Students</u>	<u>Average Cost of Attendance</u>	<u>Average Cost After Grants</u>	<u>Federal Grants as % of Cost</u>	<u>State Grants as % of Cost</u>
<b>IUB</b>	-8.6%	26.0%	10.8%	2.0%	5.9%
<b>IU Regionals</b>	-1.0%	19.5%	8.6%	6.0%	-0.3%
<b>IUPUI</b>	-1.5%	12.7%	-5.1%	8.6%	3.5%
<b>PUWL</b>	-18.6%	15.0%	-3.8%	3.1%	7.0%
<b>PU Regionals</b>	2.4%	30.1%	5.3%	5.8%	5.9%
<b>ISU</b>	11.2%	19.1%	-9.9%	9.9%	7.1%
<b>USI</b>	2.9%	41.0%	30.3%	-1.5%	5.8%
<b>BSU</b>	-15.0%	23.2%	9.9%	2.0%	4.6%
<b>VU</b>	2.8%	10.6%	-27.5%	18.1%	5.5%
<b>ITSC</b>	19.3%	15.2%	2.3%	4.0%	2.8%
<b>All</b>	0.0%	7.6%	-9.6%	6.3%	3.8%

In the 1994-95 *How Students Pay* study, IU Bloomington, PU West Lafayette, and Ball State accounted for 68.7% of the dependent students from families with incomes under \$10,000 who had complete SIS records and were included in the study, while Ivy Tech and Vincennes University made up 11.2%. In the 1999-00 study, Ivy Tech and Vincennes University students make up 33.3% of the students meeting the criteria, while IU Bloomington, PU West Lafayette, and Ball State collectively make up only 26.5% of the students.

Over the same time period, the average cost of attendance at Ivy Tech and Vincennes University increased less than at most other institutions. This is significant, because the average after-grant costs at IU Bloomington, PU West Lafayette, and Ball State far exceeded the average after-grant costs at Ivy Tech and Vincennes University. An increase in the number of students meeting the criteria at Indiana State University, together with a substantial decrease in after-grant costs at ISU, also helped move the Cost of Attendance Index down.

Finally, the percentage of the total cost of attendance covered by federal and state grants increased almost across the board. Aggregating all institutions, the percentage of total cost of attendance covered by federal grants increased from 22.8% in 1994-95 to 29.1% in 1999-00, while the percentage of total cost of attendance covered by state grants increased from 14.2% to 18%.

The combination of these three factors—a greater share of costs being covered by federal and state grants, lower-than-average increases in the cost of attendance at Ivy Tech and Vincennes University, and a large shift of dependent students with family incomes less than \$10,000 toward Ivy Tech and Vincennes University (and to a lesser degree Indiana State University) —results in the improvement seen in the Cost of Attendance Index. Although this may be less satisfying than reductions in the Cost of Attendance Index across the board, it does appear to indicate the growing role of lower-cost institutions as entry points to postsecondary education in Indiana.

## **VII. Conclusions**

The *How Students Pay* study looks at a small but significant slice of the higher education enrollment pie—full-time undergraduates who receive financial aid—and finds both change and continuity. Changes include:

- Substantial growth in grant and scholarship aid, particularly growth in state aid and the “other grants” category, which includes institutional gifts and scholarships;
- A shift in the number of students from the poorest families with complete financial aid information from IU Bloomington, PU West Lafayette, and Ball State toward Ivy Tech State College, Vincennes University, and Indiana State University;
- A reduction in the remaining cost of attendance for dependent students with the lowest family incomes;
- An increase, albeit not dramatic, in the average amounts of need-based loans for dependents and independents;
- The large number of students from higher family income groups who finance part of their education with loans; and
- Slowing annual increases in the cost of attendance at most campuses.

Continuities include:

- The resources shortfalls experienced by most students when all categories of aid plus additional loan capacity are added together;
- The comparatively greater resource shortfall experienced by independent students; and
- The general conclusion that higher education possibilities exist for most full-time undergraduates who are willing to borrow.

Two caveats must accompany these conclusions. First, the “rest of the pie”—i.e., students who don’t meet the definitions used to select students for the study—may be facing more difficult circumstances. Efforts should continue to be made to understand how the rest of the students attending postsecondary institutions in Indiana finance the costs of their education. Second, some of these conclusions may change in the next several years as institutions struggle with the state’s current fiscal situation. The relatively low increases in tuition and mandatory fees of the late 1990s appear to be coming to an end. In that respect, the 1999-00 *How Students Pay* may serve as a useful benchmark for future policy decisions.

## **Appendix A. Combined Financial Resources by Institution**

Note: This appendix contains aggregated and campus-level data on combined financial resources. These data form the basis for Figures 17, 18, and 19. The data include full-time undergraduate Hoosier financial aid recipients with complete records. Student records with a student level of 13 are not included as it is impossible to estimate maximum loan amounts without knowledge of student level. Parent contribution and student contribution are adjusted so that total family resources and financial aid cannot exceed cost of attendance.

## **Appendix B. Cost of Attendance Index by Institution**

Note: This appendix contains aggregated and campus-level data on remaining cost of attendance. These data form the basis for Figure 20. The data include full-time undergraduate Hoosier financial aid recipients with complete records. Parent contribution and student contribution are adjusted so that total family resources and financial aid cannot exceed cost of attendance.

## **Appendix E. Total Resources as Percentage of Cost 1999-00**

Note: Combines all financial resources for full-time Hoosier undergraduate financial aid recipients with complete records and compares the combined resources to total cost of attendance. Neither parent nor student contribution is adjusted in this analysis.

**TABLE E1. Dependent Resident Total Resources as Percentage of Cost**  
**All Campuses -- Complete Record Only**  
(Calculated With Unadjusted Parent and Student Contributions)
